

Some History...

Our majority owner (*Frank*) has already built *the* leading Canadian APD manufacturing company (now known as DiTEC Entrematic)

- He has been in the door business since the 80's, including the first Besam distributor in Canada
 - He still performs hands on field service, installation and sales, by far his comfort zone
- He has an interest in a Toronto glass house for the last 20 years, keeping him in touch with that side of the industry
- After a short retirement period following the sale he realized he wasn't done yet and needed to return to the industry he loves
- This passion and experience drives him to develop a product that meets the broadest possible applications you might encounter with a flexible set of electrical, software and mechanical features to get the job done the first time with ease of installation.

We identified a very real need for a more powerful product in the market over coming wind conditions, stack pressure, locking systems and access control integration for the installers and end users, this is our mission.

Our experienced staff with over 30 years in the industry, shares an established history and excellent track records for prioritizing customer satisfaction. We don't compromise on the quality and services we deliver.

We aren't alone, Micom has a collaboration agreement with a leading Japanese APD manufacturer that helps support our engineering and manufacturing operations and handles sales in the Asia region.

Every week thousands of people pass through our doors. Our technicians have a wealth of knowledge and experience in providing service to all makes and models of automatic swinging and sliding door systems. We are confident that our support will help you meet your accessibility and service needs.

We believe the following validates why you should give serious consideration to our products...

- Premium product with unsurpassed features, capabilities and performance
- Heavy duty product designed for continuous duty traffic applications
- High quality components with durable robust construction engineered to last a long time
- It's built to have the lowest life cycle costs in the industry
- Adaptable to all the job site challenges you find during installation process
- Very strong value proposition
- Broad capabilities to meet most all application requirements with a flexible design that allows you to get the job done the 1st time
- Performs equally well in healthcare, hospitals, airports, universities, education, government, multi-family, retail, office and banks
- Limited distribution minimizes competitive conflicts while allowing pricing power w/o oversaturation in the market
- Strong manufacturer support
